8th Math Unit 7 - Triangles,Angles and Transversals STAR Cards!

QUESTION	ANSWER
7a) ☆☆☆ What do the interior angles of any triangle in the world add up to?  	7a) 180°
7b) ☆☆☆ If you know 2 angles of a triangle, how do you find the missing angle measurement? *Example:*  	7b) Add the angles you have, and subtract them from 180. *Example answer:* $X + 105 + 45 = 180$ $X + 150 = 180$ $-150 \quad -150$ $X = 30$
7c) ☆☆☆ How do you find the value of x in the triangle below?  	7c) Since all 3 angles add up to 180. Write an equation like this: 3x + 2x + x = 180 Solve the equation for x 6x=180 so x=30

QUESTION	ANSWER
7d) 1) What do angles *a* and *b* add up to? 2) Explain why.  	7d) 1) 180° 2) Because these two angles make up a straight line and all straight lines are 180°.
7e) The picture below shows two parallel lines cut by a transversal  1) What is true about all the BIG angles? 2) What is true about a small angle PLUS a big angle?	7e) 1) All BIG angles are congruent <B = <B 2) Small angle plus big angle <B + <s = 180
7f) The diagram below shows two parallel lines cut by a transversal If angle 3 is 40°: 1. Name 3 other angles that are also 40° 1. What is the measure of angle 5?  	7f) 1. Angles 2, 7, and 6 are all 40° because they are all small angles. 2. Angle 5 is **140°** because **Small angles + Big Angles = 180**
