

Name: _____ HR: _____

6th Grade Math Unit 9: Describing Data STAR Cards

9

QUESTION	ANSWER
9a) ☆☆☆ 1. What is a <u>statistical question</u>? 2. Which of these is a statistical question and why: A) "How old am I?" B) "How old are the students in my school?"	9a) 1) A question that can be answered by collecting data that varies. 2) B is a statistical question because you can get a variety of ages when asking the question.
9b) ☆☆☆ 1. How do you calculate the <u>mean</u>(average)? 2. Calculate the mean of this set of data: 6, 5, 0, 7, 2	9b) 1. To calculate Mean(average): 1st) Add all the numbers 2nd) Divide by how many numbers you have 2. $6 + 5 + 0 + 7 + 2 = 20$ $20 \div 5 = 4$ The mean is 4.
9c) ☆☆☆ 1. How do you find the <u>median</u>? 2. Find the median of this set of data: 6, 5, 0, 7, 2	9c) 1. To find the <u>median</u>: 1st) Put the numbers in order from least to greatest 2nd) Choose the middle number (If there are two numbers in the middle, add them and divide by 2) 2. 0, 2, 5, 6, 7 median = 5

9d)  1. How do you find the <u>mode</u>? 2. Find the mode of this set of data: 6, 5, 0, 7, 6, 0, 6	9d) 1. To find the mode: Find the number that repeats the most. 2. mode = 6
9e)  1. How do you find the <u>range</u>? 2. How do you find the Interquartile Range (IQR)?	9e) 1. To find the <u>range</u>, subtract the smallest value from the biggest value in a data set. 2. To find the Interquartile Range or IQR, subtract Q1 value from the Q3 value.
9f)  What is the difference between <u>measures of center</u> and <u>measures of spread</u>? <i>Give examples of each</i>	9f) ● <u>Measures of center</u> represent the typical value of the data set <i>Examples: mean, median, mode</i> ● <u>Measures of spread</u> represent how far apart the data is. <i>Examples: Range, IQR</i>
