5 Science Unit 1 Sun-Moon-Earth System!

QUESTION	ANSWER
1a)  The Sun is a star! Why does the sun look bigger and brighter than the other stars?	1a) The Sun is much closer to Earth than all the other stars.
1b)  What is <u>Earth's</u> gravity?	1b) An invisible force pulls all objects toward the Earth's center.
1c)  1. What causes day and night on Earth? 2. Which part of the Earth has day and which part has night?	1c) 1. Day and night happen because the Earth spins (rotates). 2. The part of Earth that is facing the Sun has day, and the part that is facing away has night.

QUESTION	ANSWER
1d)  1. How does the <u>Sun's</u> gravity affect the Earth? 2. Why is a year 365 days long?	1d) 1. The Sun's gravity causes the Earth to go around (revolve) the Sun. 2. It takes 365 days for Earth to go all the way around the Sun.
1e)  Why do we see the Sun, Moon, and stars in different places in the sky at different times?	1e) We see these objects in different places in the sky because the Earth is both spinning (rotating) and moving around (revolving) the Sun.
1f)  Why are shadows shorter in the summer than in the winter?	1f) In the summer, the Sun is higher in the sky, so it makes shorter shadows. That's also why days are longer in the summer. (In the winter it is the opposite. The Sun is lower in the sky and so the shadows are longer and the days are shorter.)
