6th Grade Math Unit 4: Percents and Conversions STAR Cards**4**

QUESTION	ANSWER
4a)  1. How many feet are there in a yard? 2. How many inches are there in a foot?	4a) 1. 3 feet in 1 yard 2. 12 inches in 1 foot
4b)  1. What is the definition of <u>percent</u>? 2. How do you write 34% as a fraction?	4b) 1. <u>Percent</u> is a fraction out of 100 2. $\frac{34}{100}$
4c)  What do you do any time a question asks you: “<u>what percent</u>?” <i>Example: If there are 50 sixth graders, and 40 of them have brown hair, <u>what percent</u> of sixth graders have brown hair?</i>	4c) 1st) Figure out what fraction represents the situation Ex) $\frac{\text{Part}}{\text{Whole}} = \frac{40}{50}$ 2nd) Change that fraction into a percent by making it equal to a fraction out of 100. Ex) $\frac{40}{50} = \frac{80}{100} = 80\%$

4d)

We learned 2 main ways to convert fractions into percent. Explain how you could change the fractions below into percents.

1. $\frac{17}{20}$

2. $\frac{3}{8}$

4d)

1. $\frac{17}{20}$

Find an equivalent fraction with 100 as the denominator.

Example:

$$\frac{17}{20} = \frac{85}{100} = 85\%$$

x 5

x 5

2. $\frac{3}{8}$

Divide the numerator by the denominator and convert the decimal to a percent.

Example: $3 \div 8 = .375 = 37.5\%$

4E)

How would you find a percent of a number?

Ex: Find 20% of \$80

4E)

Change the percent into a decimal and multiply it by the number.

Ex: $.20 \times 80 = 16.00$

or

	%	Decimal	Fraction
P	20	.20	16
W	100	1	80

$\xrightarrow{\div 100}$
 $\xrightarrow{\times 80}$
