6 Science Unit 7 Waves STAR Cards!

QUESTION	ANSWER
7a)  What does a wave do?	7a) A wave transfers energy from one place to another
7b)  1. What are electromagnetic waves? 2. Give at least 3 examples of electromagnetic waves.	7b) 1. Electromagnetic waves are invisible energy waves that travel through empty space on our planet and outer space. 2. Examples: ● light waves ● radio waves ● microwaves ● ultraviolet waves ● x-rays ● gamma rays
7c)  1. What are mechanical waves? 2. Give an example of a mechanical wave.	7c) 1. Mechanical are waves that transfer energy through a substance 2. Examples: ○ Sound waves ○ Water waves

QUESTION	ANSWER
7d)  <u>Amplitude</u>, <u>wavelength</u>, <u>crest</u>, and <u>trough</u> are wave features. Label each of these on the wave diagram below 	7d) 
7e)  <u>Amplitude</u> , <u>frequency</u> and <u>wavelength</u> are wave features that describe the energy traveling through the wave. Define these 3 wave properties.	7e) 1. <u>Amplitude</u> measures the strength of the wave's energy. 2. <u>Frequency</u> is the speed of the wave 3. <u>Wavelength</u> measures the distance between waves
7f)  What happens when a wave is <u>reflected</u>?	7f) When a wave is reflected it bounces off a new substance (medium)
7g)  What happens when a wave is <u>absorbed</u>?	7g) When a wave is absorbed, its energy gets taken in by the material it hits.
7h)  What happens when a wave is <u>transmitted</u>?	7h) When a wave is <u>transmitted</u>; the wave passes through a substance (medium) and continues to travel
