

Name _____ HR _____

6

6 Science Unit 6 Chemistry: Matter STAR Cards!

QUESTION	ANSWER
6a)  1. What is density? 2. How can we determine the <u>relative density</u> of different materials?	6a) 1. Density is how many particles are packed into a certain space. 2. Materials that are less dense will float on top of materials that are more dense.
6b)  How do we calculate the density of an object?	6b) Density = Mass ÷ Volume $D = \frac{\text{Mass}}{V}$$D = \frac{m}{V}$

QUESTION	ANSWER
6c)  1. What is a pure substance? 2. Give one example of a pure substance.	6c) 1. A substance that cannot be separated into simpler parts. 2. Examples: ○ Gold (Au) ○ Oxygen (O) ○ Salt (NaCl) ○ Water (H₂O)
6d)  1. What is a mixture? 2. Give one example of a mixture.	6d) 1. A mixture is 2 or more substances combined that can be separated. 2. Examples of Mixtures: ○ Salt Water (H₂O + NaCl) ○ Air ○ Milk
