6th Grade Math Unit 3: Ratios and Proportions STAR Cards

3

QUESTION	ANSWER
3a)  What is a <u>ratio</u>?	3a) A <u>ratio</u> is a comparison between 2 quantities.
3b)  Describe the ratio between raspberries and mangoes in 4 different ways. 	3b) 1. For every 5 raspberries, there are 3 mangoes. 2. 5 : 3 3. 5 to 3 4. $\frac{5}{3}$
3c)  1. What is a <u>unit rate</u>? 2. What does the word <u>per</u> mean in the situation below: <i>"8 lamps cost \$40. What is the cost per lamp?"</i>	3c) 1. "Uni" means 1, so a <u>unit rate</u> is always a rate out of 1. 2. <u>PER</u> means "for every 1" lamp.

3d)

As seen in the table, the ratio of sugar to lemons in this lemonade is 6 to 8. How can you create equivalent ratios for this relationship? Explain or show.

sugar	lemons
6	8

3d)

To find equivalent ratios, you multiply or divide both terms by the same number.

sugar	lemons
3	4
6	8
18	24
