

Name _____ HR _____

2

7th Grade Science Unit 2: Ecosystems STAR Cards!

QUESTION	ANSWER
2a)  Name and <u>describe</u> the 3 types of relationships among organisms 1.)  2.)  3.) 	2a) 1.) <u>Predation</u>: one organism kills and eats another organism 2.) <u>Competition</u>: two organisms fight over resources 3.) <u>Symbiosis</u>: two organisms have a close relationship that benefits at least one of them
2b)  There are 3 types of symbiotic relationships among species of organisms in an ecosystem. Describe each of the forms of symbiotic relationships 1. Mutualism 2. Commensalism 3. Parasitism	2b) 1. Mutualism  2. Commensalism  3. Parasitism  1. <u>Mutualism</u>: Both organisms helped 2. <u>Commensalism</u>: 1 organism helped, 1 not affected 3. <u>Parasitism</u>: 1 organism helped, 1 harmed
2c)  Describe how each of the 3 types of organisms get their energy 1. Producers 2. Consumers 3. Decomposers	2c) 1.) <u>Producers</u> make their own energy through photosynthesis (ex. plants) 2.) <u>Consumers</u> get their energy by eating other organisms. 3.) <u>Decomposers</u> get their energy from breaking down dead plants and animals

QUESTION	ANSWER
2d)  Where does energy begin in an ecosystem? Explain why.	2d) Energy begins with the Sun because the sun gives energy to producers to make their own food - (which starts the cycle of energy through an ecosystem)
2e) What is the difference between photosynthesis and cellular respiration?	2e) In photosynthesis plants make their own food (sugar) and release oxygen using water, carbon dioxide and sunlight. In cellular respiration, organisms use oxygen to break down sugar into energy for their cells, releasing carbon dioxide. 

QUESTION	ANSWER
2f) Just one event in an ecosystem can have an impact on the whole ecosystem. If a disease killed all the deer in this ecosystem.... 1.) What would happen to the grass population and why? 2.) What would happen to the wolf population and why? 	2f) 1.) The grass population would increase because there would be no deer eating the grass 2.) The wolf population would decrease because the wolves would have no deer to eat
