

Name _____ HR _____

7th Grade Science Unit 3: Earth Systems STAR Cards!

3

QUESTION	ANSWER
3a) ☆☆☆ 1. The Earth's crust is broken down into pieces, what are those pieces called? 2. The places where the pieces of the Earth crust meet are called plate boundaries. Give at least 2 examples of what occurs at these plate boundaries.	3a) 1. Tectonic Plates 2. -Earthquakes -Mountains -Volcanoes -Rift Valleys
3b) ☆☆☆ Describe a <u>divergent</u> plate boundary.	3b) A <u>divergent</u> plate boundary is where 2 plates spread apart - creating rift valleys 
3c) ☆☆☆ Describe a <u>convergent</u> plate boundary.	3c) A <u>convergent</u> plate boundary is where 2 plates push together (collide) - creating mountains 
3d) ☆☆☆ Describe a <u>transform</u> plate boundary	3d) A <u>transform</u> plate boundary is where 2 plates slide past each other - creating earthquakes 
3e) ☆☆☆ Describe a <u>subduction</u> zone.	3e) A <u>subduction</u> zone is where 1 plate goes under another - creating volcanoes 

QUESTION	ANSWER
3f) ☆☆☆ Explain how the following processes change the landscape of the Earth: ● weathering ● erosion ● deposition	3f) ● <u>Weathering</u> breaks rocks. ● <u>Erosion</u> moves the pieces of rock away. (See picture below) ● <u>Deposition</u> makes pieces of rock pile up.  
3g) ☆☆☆ Identify the different steps of the water cycle in the picture. 	3g) 
3h) ☆☆☆ 1.) What is the <u>Sun's</u> role in the water cycle? 2.) What is <u>gravity's</u> role in the water cycle?	3h) 1.) The sun provides energy to evaporate the water and start the cycle 2.) Gravity forces water to move downward causing precipitation and runoff
