7th Grade Science Unit 4: Earth Systems STAR Cards!

4

QUESTION	ANSWER
4a) ☆☆☆ 1. The Earth's crust is broken down into pieces, what are those pieces called? 2. The places where the pieces of the Earth crust meet are called plate boundaries. Give at least 2 examples of what occurs at these plate boundaries.	4a) 1. Tectonic Plates 2. -Earthquakes -Mountains -Volcanoes -Rift Valleys
4b) ☆☆☆ Describe a <u>divergent</u> plate boundary.	4b) <u>A divergent</u> plate boundary is **where 2 plates spread apart** - creating rift valleys 
4c) ☆☆☆ Describe a <u>convergent</u> plate boundary.	4c) <u>A convergent</u> plate boundary is **where 2 plates push together** (collide) - creating mountains 
4d) ☆☆☆ Describe a <u>transform</u> plate boundary	4d) <u>A transform</u> plate boundary is **where 2 plates slide past each other** - creating earthquakes 
4e) ☆☆☆ Describe a <u>subduction</u> zone.	4e) <u>A subduction zone **is**</u> where **1 plate goes under another** - creating volcanoes 

QUESTION	ANSWER
4f) ☆☆☆ Explain how the following processes change the landscape of the Earth: ● weathering ● erosion ● deposition	4f)  ● <u>Weathering</u> **breaks rocks.** ● <u>Erosion</u> **moves the pieces of rock** away. (See picture below) ● <u>Deposition</u> makes **pieces of rock pile up.** 
4g) ☆☆☆ Identify the different steps of the water cycle in the picture. 	4g) 
4h) ☆☆☆ 1.) What is the <u>Sun's role</u> in the water cycle? 2.) What is <u>gravity's role</u> in the water cycle?	4h) 1.) **The sun provides energy to evaporate** the water and start the cycle 2.) **Gravity forces water to move downward** causing precipitation and runoff
