6th Grade Math Unit 6: Expressions STAR Cards

6

QUESTION	ANSWER
6a) ☆☆☆ What does 5^3 mean?	6a) 5^3 means that 5 is being multiplied by itself 3 times. $5 \times 5 \times 5 = 125$
6b) ☆☆☆ - List the <u>order of operations</u>: - When do you use the order of operations?	6b) 1. Parentheses 2. Exponents 3. Multiplication or Division (<i>from left to right</i>) 4. Addition or Subtraction (<i>from left to right</i>) - You use the order of operations <u>every time</u> a problem has more than one operation. Ex) $5 + 3 \times 6$
6c) ☆☆☆ What should you <u>do first</u> in the problems below? <u>Explain why.</u> 1. $5 + 3 \times 6$ 2. $8 \div 2 \times 4$	6c) 3×6; because you always multiply before you add $8 \div 2$; because <i>when there is multiplication and division, you always do whichever is further to the left first</i>

6d)

What is a variable?

6d)

A variable is a **letter** that **represents a number we don't know**.

6e)

How do you write an equivalent expression when you have a number directly in front of parentheses?

Like this: $5(3x + 2)$

6e)

When a number is directly in front of parentheses, multiply **the number outside the () by everything inside the ()**.

$$5(3x + 2) = 15x + 10$$
