6th Grade Math Unit 2: Area and Surface Area STAR Cards

2

QUESTION	ANSWER
2a) ☆☆☆ 1. What is <u>area</u>? 2. What is the area of this shape? 	2a) 1. <u>Area</u> is the number of square units that cover a shape. 2. The area of this shape is 13 square units. 
2b) ☆☆☆ How do you find the <u>area of a rectangle</u>?	2b) **Base x Height** or Length x Width
2c) ☆☆☆ How do you find the <u>area of a parallelogram</u>? ex. 	2c) Multiply the **base x height.** ex. $15\ cm \times 5\ cm = 75\ cm^2$

2d)

1. Which is the <u>height of this triangle</u>?
2. How do you know?

2d)

1. 4 cm is the height.
2. The height always makes a 90 degree angle with the base (even if the height does not hit the base).

2e)

How do you find the <u>area of a triangle</u>?

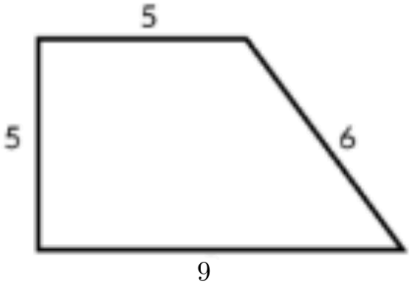

2e)

1st) Multiply the Base x Height.

2nd) Divide by 2

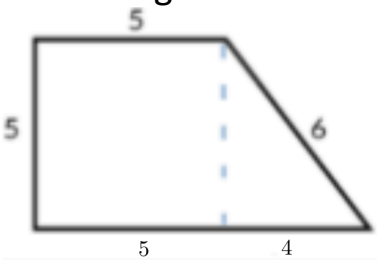

2f)

How would you find the area of an unusual shape like this:

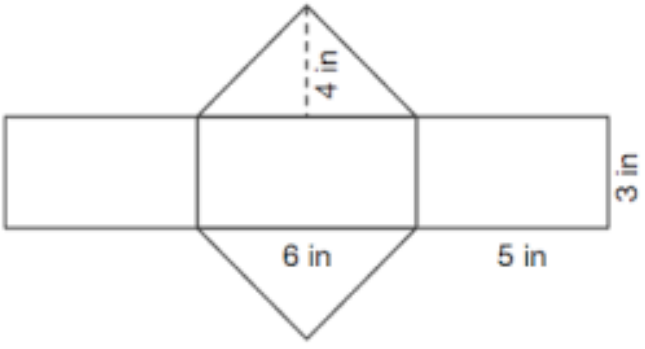

2f)

1) Break it up into shapes you know.
2) Fill in the missing side lengths.
3) Find the area of each shape.
4) Add them all together.

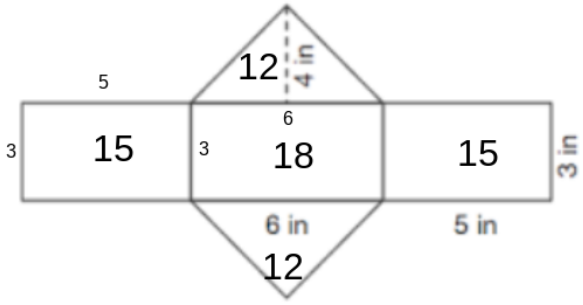

2g)

How do you find the <u>surface area</u> of this net?

2g)

1) Fill in the missing side lengths.
2) Find the area of each shape.
3) Add them all together.

15 + 15 + 18 + 12 + 12 = 72 sq inches
