6 Science Unit 3 Geologic Time STAR Cards!

QUESTION	ANSWER
3a) ☆☆☆ 1. What is the continental drift theory? 2. Name <u>at least one</u> piece of evidence that supports this theory.	3a) 1. The idea that the continents were once joined together and have moved apart over time. 2. The continents look like they would fit together like a puzzle. <u>OR</u> Fossils of the same organisms have been found on different continents. 
3b) ☆☆☆ What does the Law of Superposition tell us about the ages of the rock layers and fossils in those rock layers?	3b) The Law of Superposition explains the oldest rock layers and fossils are on the bottom and the younger rock layers and fossils are on the top. 

QUESTION	ANSWER
3c)  1. What is a fossil? 2. What can fossils tell us about Earth's past?	3c) 1. Fossils are remains or traces of plants and animals that existed long ago. 2. They provide evidence to show how Earth and organisms have changed over time. 
3d)  Scientists often look for similarities in body parts of fossils and modern animals. What are the <u>two</u> major things that these similarities can tell us?	3d) If animals have similar body parts, it can mean: 1. They share a common ancestor in the past <i>or</i> 2. They adapted in similar ways to live in the same kind of environment.  Human Cat  Bats Birds
